## Beyond the War on Invasive Species: A Permaculture Approach to Ecosystem Restoration

Invasive species are everywhere, from forests and prairies to mountaintops and river mouths. Their rampant nature and sheer numbers appear to overtake fragile native species and forever change the ecosystems that they depend on. Concerns that invasive species represent significant threats to global biodiversity and ecological integrity permeate conversations from schoolrooms to board rooms, and concerned citizens grapple with how to rapidly and efficiently manage their populations. These worries have culminated in an ongoing “war on invasive species,” where the arsenal is stocked with bulldozers, chainsaws, and herbicides put to the task of their immediate eradication. In Hawa

What others say about this ebook:

**Review 1:**

I appreciated the "look beneath the surface policy" of this book as well as its ability to provide an alternative to those convinced that non-natives/invasives are problematic. That said, most non-natives are not a problem and should be left alone, as Nature must be allowed to evolve on its own terms in order to ensure its (and our) long-term health.

**Review 2:**

This is an outstanding book. Tao Orion lays out the real story behind the bogus scare of invasive species, and the true objectives of the herbicide-industrial complex who foment it. Essential reading.

**Review 3:**

Highly recommended, This book should be in the hands of every land manager dealing with invasive species. I work for the U.S. Fish and Wildlife Service, and I have already recommended it to several of my co-workers and like-minded friends.

**Review 4:**

This book challenges the assumptions that are being made in the restoration field. The author has done her research and knows her material.

**Review 5:**

There are probably three types of non-fiction. The first is a book that takes what is already expressed and re-arranges it in new ways to hopefully advance the understanding of a subject. The second takes what has been expressed and adds to it thereby adding to an existing concept. The third and most rare book puts forward an idea that is altogether new by assembling old and new thinking. Tao Orion's book is among these rare books. Her book draws from the emerging field of systems and resilience thinking, the biological and ecological sciences, traditional ecological knowledge, history, and Permaculture (to name a few of the larger fields that are integrated here) to put forward a bold reimagining of our relationship with plants and the process of restoration. This is an extremely important , well presented, and inspiring book.
