What others say about this ebook:

**Review 1:**

Forty years ago I stupidly sold my last boat. I have missed it every day since. It was my sixth and best boat, a Chrysler Lonestar. Three of these six boats I built myself, one I shared the work with my father. Building a plywood boat is a bagatelle particularly using the stitch and glue method. The seventh boat is built by this method. In the process I have bought six books from Amazon though all of the information that I needed was free on the internet. The books are "Go Build Your Own Boat" and Build The New Instant Boat by Harold Payson, "Boats with an open Mind" by Philip Bolger, "Boat Building For Beginners" by Jim Michalak, "Ultra Simple Boat Building" by Gavin Atkin and "Understanding Boat Design" by Ted Brewer There are separate reviews for each of these books.

Ultra Simple Boat Building" by Gavin Atkin is an excellent book for the home builder and I give it five stars. It features 17 very complete plans and instructions for a number of small plywood boats. The diagrams and dimensions are easy to read. Adkin's designs have flotation chambers which are a great safety feature. He explains Epoxy stitch and glue and polyurethane stitch and glue. He also includes a technique called simplified chine log construction. This method places a frame member outside of the hull along the chine. Bolger used this technique in Tortoise and justified it on grounds that it made the boat easier to clean and protected the plywood chine. He believed that it was hydrodynamically satisfactory. For small slow moving displacement hulls he is probably correct. For faster powered planing hulls I have my doubts. It is not completely clear that it really simplifies the construction over say placing the chine log inside the hull in the conventional manner. No matter, the resultant boat will probably be satisfactory. Most of these boats are small and narrow with low sides and are suitable for quiet waters. I know of one individual who takes one off shore here near Los Angeles where it is paddled like a kayak. He has not yet drowned and probably will be okay. Adkin also included plans for a "Puddle Duck Racer" which would be a great choice for someone who enjoys camaraderie and mild competition. I am intrigued by "Dogsbody" which of the offerings in this book is my favorite. One should pay attention to the recommended loadings of Atkin's boats for it could be catastrophic to over load them. Adkin presents a method, not his own apparently, of building a skiff that requires no plans. I found this intriguing because I and a partner once (1953) built a boat using a very similar method. That boat was assembled using glue and light framing with brass screws. I think it cost less than \$20 at the time. It saw frequent service with a 5 hp Johnson outboard and lasted at least 10 years when I lost track of it. Adkin offered a piece of simple advice. When going to the store always buy a clamp. You cannot have too many clamps. I think Norm Abrams (This Old House) once made a similar recommendation.

**Review 2:**

Good overall. Not as much detail as I was expecting, but it does show 18 different designs. This should help you narrow down a design.

**Review 3:**

A very good beginners book has some nice plans for simple boats. I am building one now.

**Review 4:**

Title says it all.

**Review 5:**

Just perfect, thanks.
